Project title	Creating solid waste management system in Central Development Region
Location	The project is located in the Central Development Region. At the initial collection of solid waste management, the activities will be carried out in several locations in Anenii Noi rayon, then the waste will be transported to the village Bulboaca polygon, the same district. The next stage in the project targets the inclusion in the frame of the project of several localities from the Central Region. Also, it is expected the purchase of equipment for sorting and making effective the use of wastes as well.
Applicant	Bulboaca town hall
Partners	Anenii Noi, Roşcani, Calfa, Hîrboveţ, Speia, Teliţa, Cobusca Nouă, Gura Bîcului
General objective	Establishment of a regional system of waste collection to ensure adequate sanitation in nine localities in the Central Development Region
Short desription of the project	The localities involved in the project are close to Nistru River and Bic river. There is not a well managed waste collection, as the wastes are thrown by people on different places, forming so many unauthorized dumps. Most of these dumps are near the water and especially to Nistru and Bic rivers. Negative impact in this case has a much greater expansion than the localities involved in the project. The project's main advantages are: the project is based on extending an existing sewerage system, the project has strong potential and can be extended over a much larger geographical area than the initial one.
Results	Creation of an efficient waste management service would have as a result improving the environmental situation in beneficiary areas from the entire region. The residents will benefit from services and access in this area.
Current status of the project	In search for financal resources
Implementation period	12 months
Costs	7 077 730,00 lei
