

Project title	Construction of sewerage system in the villages Bravicieni and Malaiești from Orhei rayon
Location	Brăviceni town hall
Applicant	Brăviceni town hall, Orhei rayon
Partners	Mălăiești town hall, Orhei rayon, Orhei rayon council
General objective	The project goal is the construction of sewage system, installing sewage treatment plant with their subsequent use for irrigation. This project aims to be a pilot project in implemented in an agreement between local public authority and its partners to further implementation in other localities of Moldova.
Short description of the project	The main difficulties in rural beneficiary localities are: unfavorable health status of local poor ecological situation of the territory, lack of water sources for irrigation, the region feels the need for construction of sewerage systems. The first stage requires the evaluation of technical and project engineering of the sewer system. Simultaneously starts the second step which provides a sensitive campaign for people and entities in the region about the importance of project implementation, implementation methods, products and expected results. The third phase includes the achievement of procurement tenders and identification service.
Results	<p>Connection of 1350 households to the sewage system;</p> <p>Connection of 25 businesses to the sewer system;</p> <p>Connection of 15 public institutions to the sewer system;</p> <p>Reduction of soil and groundwater pollution in the region.</p> <p>Three villages with modern sewerage system;</p> <p>A sewer network length of about 20 km;</p> <p>7 new jobs in the municipal enterprise, sewer system management.</p>
Current status of the project	In search for financial sources
Implementation period	18 months
Costs	4 989 745,00 lei
