

Project title	Creating the agro-industrial park using renewable energy
Location	Five rayons: Nisporeni, Ungheni, Călărași, Hîncești and Strășeni
Applicant	Nisporeni Council Rayon
Partners	ORIO, Academica, Gamistar-com
General objective	Elaboration of technical project for an energy complex on alternative energy sources, based on the profitable and environmentally sound energy production, with an annual volume of net sales of about 25.0 million euro.
Short project description	<p>Implementation of the project in the region will contribute significantly to increased agricultural production, ensuring and developing the region and country's export. Implementation of the project will create over 300 (three hundred) new jobs, improving the social situation in the region.</p> <p>Energy park contains: biogas plant, waste processing plant with subsequent production of construction materials, production line based on fuel briquettes. These items will annually process over 100,000 tones of waste and agricultural residues.</p> <p>Due to the heat generated in the region, which will be used to increase greenhouse vegetables, it will ensure the production of 3600 tons of vegetables at a competitive price. These initiatives will facilitate growth in budget revenues, but also a significant reduction in budgetary institutions' costs maintenance at the expense of the energy produced at low cost.</p>
Results	<ul style="list-style-type: none"> - Substantial increase in budget revenues - Increased export in the region and in the country - Creation of 300 new jobs - Significant reduction in budgetary institutions maintenance costs - Improving health in the region as a result of improving the ecological situation
Current status of project	In search for financial resources
Implementation period	36 months
Costs	438.400.000 lei
